
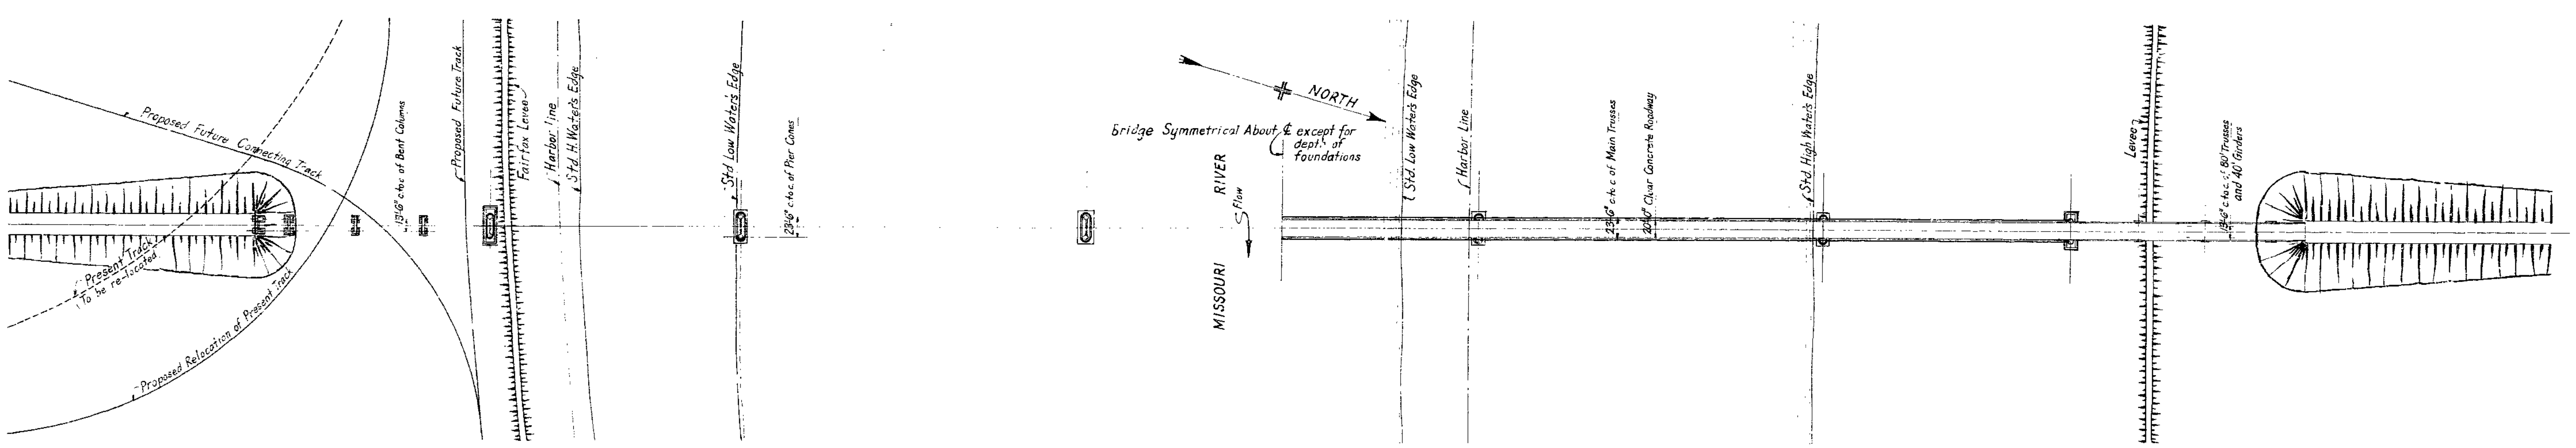
ELEVATION



PLAN

GENERAL NOTES:

Concrete in Slab to have a minimum ultimate strength of 3750 pounds per square inch, as specified in the special provision of the Specifications. Concrete in Approach Bents and Abutments, in Pier Shafts, in working chambers of Caissons, in seal course and base of Piers 5 and 10 to be Class B. Concrete in bases of Main Piers, except as called for above, to be Class C.

Before commencing construction, the contractor constructing the foundations for the Main Piers shall submit to the Engineers for approval, complete working details of the method he proposes to use. The method and details proposed shall be approved before construction of such foundations is begun.

Bevel exposed edges of all concrete work $\frac{3}{4}$" where no other bevel is noted. Provide substantial keys at all concrete construction joints.

All piling shall be driven to support a load of not less than 25 Tons. No piling shall be ordered until authorized by the Engineer in writing. Piling in Piers 5 and 10 to be plain timber. All other piling to be creosoted.

Lap splices in reinforcing bars 48 diameters unless otherwise noted. Hooks on bars shall be bent to a diameter of not less than six times the diameter of the bar. Bars bent up, shall, unless otherwise noted, be bent to an angle of 45° with the bottom reinforcing, using a radius of bend of not less than four diameters.

All stresses shown above are in kips
Design stress including wind shown only where such stress governs.
Live load stresses shown include impact.

GENERAL NOTES

DESIGN — In accordance with the A.S.H.O. Standard Specifications for Highway Bridges dated 1931, modified.

LOADING — H15 Live Load

UNIT STRESSES — Stresses in Carbon Steel, Cast Steel, etc., are those given in Paragraph 5.4.2. of the Specifications in the column headed: "For live load and lateral forces." Stresses in Silicon Steel are 150 % of those allowed for Carbon Steel.

MATERIALS — All Carbon Steel, Silicon Steel, Cast Steel, Forgings, etc. shall conform to the current specifications of the A.S.T.M. "S.S." indicates Silicon Steel; "C.S." Carbon Steel.

PUNCHING & REAMING — All work shall conform to the Paragraph headed: "Fabrication of Structural Steel" in the special provisions of the Specifications.

RIVETS — Rivets shall be 7/8" ϕ except as otherwise noted on detail drawings.

PAINT — Structural Steel and Castings shall receive one shop coat and two field coats of paint as called for in the Paragraph headed: "Paint" of the special provisions of the Specifications.

GUSSETS — All Gusset Plates shall be cut back not more than 4" from the back of the chord lb.

NOTES

All material marked "S.S." to be Silicon Steel. All other material to be Carbon Steel.
④ indicates maximum number of holes out to maintain required net section.
All rivets 7/8"φ, except in battens and lacing or bracing, which are to be 3/4"φ.
Clear distance between batten plates on tension members shall not exceed 3'-0".
See Sheet #10 for Typical Cross-Section.
Weight of pins and pin nuts is included in the quantity item for structural steel. Fabricator is to furnish, without extra compensation, any pilot and driving nuts required.

NOTES

All material in sway frames and portals to be Carbon Steel, unless noted. All rivets ⅞" ϕ except rivets in batten plates & lace bars of bracing, which are ¾" ϕ

VOID — Slab Reinforcing Steel to have no paint applied in the shop. Field paint to consist of 2 coats of paint similar to that used on the Structural Steel, applied to the exposed flange of the tees after the forms have been removed and surface cleaned with a wire brush

NOTE:- Changes in cross section are due to change from slab as shown to a slab 7½" thick, consisting of 6¾" Haydite concrete and 1" of portland cement concrete, poured monolithically. Slab Reinforcing:- Longitudinal- ½" ϕ @ 6" ctrs. in bottom, ½" ϕ @ 8" ctrs. top. Transverse- 2-½" ϕ top and bottom between adjacent crossbeams. For revised cross section of thru spans see Kansas City Bridge Co. Drawing No. 5303. For details and setting plan of all deck reinforcing see Sverdrup & Parcel Drawing No. X1.

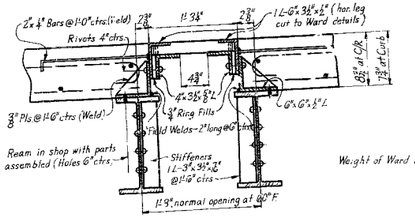
SECTION A



EXPANSION DEVICE AT BENTS 3 AND 12

Attachment of the Ward Exp. Device to structural steel supports to be made in accordance with manufacturer's details.

Expansion device and structural steel supports to be assembled together in shop to insure fit in field. Supports to be curved to a parabola to conform to crown of roadway. Match-mark all pieces after shop assembly.

Weight of Ward Exp. Device is included in the quantity item for Cast Steel.

TYPICAL DETAIL FOR TRUSSES

SLAB DETAIL AT BENTS 4 AND 11

NOTES

All structural steel shown on this sheet to be Carbon Steel.

All rivets ⅞" ø unless noted

④ indicates maximum number of holes out to maintain net section of member.

SLAB REINFORCEMENT FOR I-BEAM AND DECK TRUSS SPANS

Longitudinal: ⅝" ø bars @ 11" ctrs. top and bottom, with ⅝" ø bent bars alternating top and bottom, in between, giving 5½" spacing in top over cross beams and 5½" spacing in bottom at mid-panel. Lap splices 2'6".

Transverse: ½" ø bars at about 1'0" spacing, alternating top and bottom.

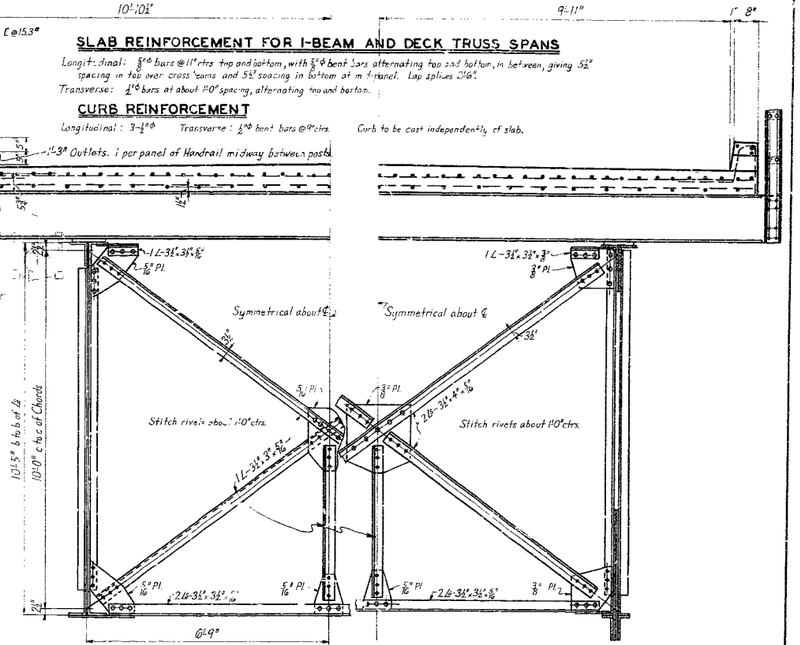
CURB REINFORCEMENT

Longitudinal: 3-¾" ø Transverse: ½" ø bent bars @ 9" ctrs. Curb to be cast independently of slab.

1-3" Outlets, 1 per panel of Handrail midway between posts.

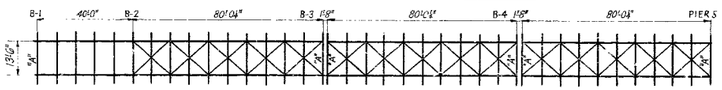
Punch holes 1⅛" ø in shop, ream to 1⅛" ø in field for rail alignment.

Flow coats for handrail with ⅞" ø rivets.



HALF CROSS-SECTION AT SWAY FRAMES

HALF CROSS-SECTION AT U0-L0



Cross beams marked "A" are 16" WF @ 45#. All other cross beams are 16" WF @ 40#. Longitudinal dimensions given are parallel to grade.

Bars having "D" as first letter of mark are used in beam and deck truss spans; those having "S" as first letter are used in through truss spans.

Second letter "L" designates longitudinal bars; T designates transverse bars.

All reinforcing steel to comply with specifications and general drawings furnished by Sverdrup and Parcel.

NOTE

For section through slab on through truss spans see Kansas City Bridge Co. Drawing 5303, dated Oct, 1933.

GENERAL NOTES:

Design Specifications: A.A.S.H.T.O. - 1977
Design Loading
HS-20-44 Floor System, No Future Wearing Surface, Earth 120#
Equivalent Fluid Pressure 30#

Design Unit Stresses:
Class A Concrete (Substr. Repair) fc = 1500 psi.
Class B Concrete (New Substr.) fc = 1,200 psi.
Class B1 Spec. Conc. (Superstr. Grid Fill) fc = 1,600 psi.
Reinforcing Steel fy = 60,000 psi (Grade 60)
Structural Carbon steel fs = 20,000 psi.
Minimum clearance to reinforcing steel shall be 1½ unless otherwise shown
Floor System:
Steel Grid Floor (Half Conc. Filled) (See Special Provisions)

Painting: Shop None; Field, System A or B Aluminum. (See Special Provisions)

Note: Light dotted lines indicate old work. Heavy lines indicate new work. Contractor shall verify all dimensions in field before ordering new steel.
Note: For field connections use ⅞" High Strength Bolts, holes 15/16" except as noted.
Note: A minimum vertical clearance of 21'-6" from top of rails and a minimum lateral clearance of 12'-6" from the centerline of track to nearest temporary construction falsework shall be maintained during construction.
Note: All joint filler shall meet the requirements of Std. Spec. 1057.2.4.

SECTION B-B

GENERAL NOTES:

THE EXPANSION JOINT SEAL SHALL BE INSTALLED IN ACCORDANCE WITH THE MANUFACTURER'S INSTRUCTIONS SHOWN ON THE SHOP DRAWINGS AND IN ACCORDANCE WITH THE SPECIAL PROVISIONS.

THE NUTS ON THE ANCHOR STUDS SHALL BE TIGHTENED TO THE FOOT POUNDS "G" SPECIFIED IN THE TABLE OF DIMENSIONS. RETIGHTEN TO "G" FOOT POUNDS A MINIMUM OF 30 MINUTES AFTER INITIAL TIGHTENING. THE WELDED ANCHOR STUDS SHALL BE THE REDUCED BASE TYPE.

MATERIAL FOR THE ARMORED JOINT SHALL BE A36 STRUCTURAL GRADE STEEL.

SEE SPECIAL PROVISIONS FOR PAINTING.

PLAN DIMENSIONS ARE BASED ON INSTALLATION AT 60°F. THE EXPANSION GAP AND OTHER DIMENSIONS SHALL BE ADJUSTED DURING INSTALLATION FOR COMPLIANCE WITH ANY TEMPERATURE CHANGE.

PLATES SHALL BE FIELD ADJUSTED BY ADDING OR REMOVING METAL SHIMS (2 x 3), AS REQUIRED FOR TEMPERATURE CORRECTION. THE EXPANSION GAP SHALL BE ADJUSTED FOR ANY TEMPERATURE CORRECTION PRIOR TO POURING TOP OF END BENT BACKWALL.

CONTACT SURFACE OF STEEL TO ALUMINUM SHALL BE INSULATED WITH THE MATERIAL SPECIFIED ON THE SHOP DRAWINGS.

FURNISHING AND INSTALLING THE ELASTOMERIC EXPANSION JOINT SEAL WILL BE PAID FOR AT THE CONTRACT BID PRICE PER LINEAR FOOT.

FURNISHING, PAINTING AND INSTALLING THE STRUCTURAL STEEL ARMORED JOINT WILL BE INCLUDED IN THE CONTRACT PRICE BID FOR STEEL GRID FLOOR (CONC. FILLED)

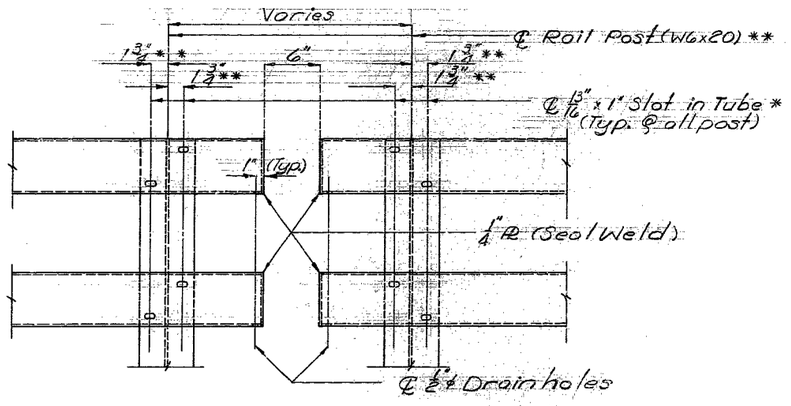
RAIL POST CONNECTION AT RELOCATED POST NEAR EXP. GAP



RAIL DETAILS AT EXP. JOINTS AND AT RAIL ENDS AT END BENTS

Note: Rail ends 2" from End Post of End Bt. #16 and rail ends 12" past first post at End Bt. #1.

Railing shall be fabricated in two or three panel lengths unless otherwise approved.

Rail post, all steel connecting bolts, washers, & connection plates shall be galvanized after fabrication. For protective coating and material requirement see section 1040 of standard specifications.

Structural steel tube railing shall be galvanized same as steel rail post and conform to the requirement of ASTM designation A-500 or A-501.

Splice in rails shall be provided at about the ¼ point between post. Rail expansion splice should be provided at Transverse Seal Joints.

Fabrication of structural steel shall be in accordance with section 712 of standard specifications.

Note: For rail post details not shown see Sheet No. 20 & 21.

*Note: Optional use of ⅝" ϕ studs to be fastened to T.S. 6"x3"x3/16 in place of ⅞" ϕ Button Head Bolts (Shop or field applied) 1" Extra heavy spacer to be used in place of ¾" Extra heavy spacer.

** See sheet No. 22 for rail connection details of channel rail post. For attachment of rail to vertical truss members see Special Provisions.

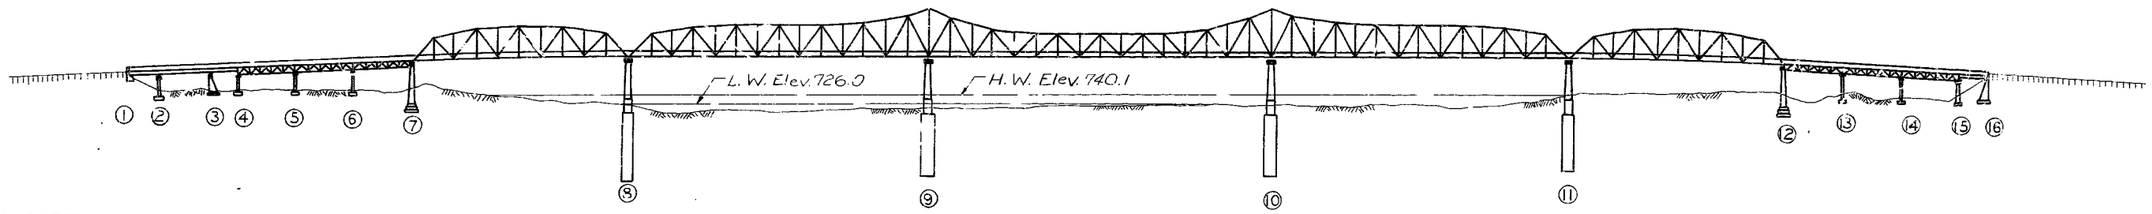
FINAL PLANS



GENERAL ELEVATION

GENERAL NOTES:

Design Specifications: A.A.S.H.T.O.-1977
Design Loading
H3-20-44 Floor System, No Future Wearing Surface, Earth 120#
Equivalent Fluid Pressure 30#

Design Unit Stresses:
Class A Concrete (Substr. Repair) fc = 1500 psi.
Class B Concrete (New Substr.) fc = 1,200 psi.
Class B1 Spec. Conc. (Superstr. Grid Fill) fc = 1,600 psi.
Reinforcing Steel fy = 60,000 psi (Grade 60)
Structural Carbon steel fs = 20,000 psi.
Minimum clearance to reinforcing steel 1½ unless otherwise shown
Floor System:
Steel Grid Floor (Half Conc. Filled) (See Special Provisions)

Painting: Shop None; Field, System A or B Aluminum. (See Special Provisions)

Note: Light dotted lines indicate old work. Heavy lines indicate new work. Contractor shall verify all dimensions in field before ordering new steel.
Note: For field connections use ⅞" High Strength Bolts, holes 15/16" except as noted.
Note: A minimum vertical clearance of 21'-6" from top of rails and a minimum lateral clearance of 12'-6" from the centerline of track to nearest temporary construction falsework shall be maintained during construction.
Note: All joint filler meet the requirements of Std. Spec. 1057.2.4.

LOCATION PLAN

GENERAL NOTES

SPECIFICATIONS: Standard Specifications of the Kansas State Highway Commission, 1955 Edition, supplemented by General and Special Provisions.

DESIGN: In accordance with Division III of the A.A.S.H.O. "Standard Specifications for Highway Bridges", 1953 Edition.

DESIGN LOADING: Live Load - H15-44.
Dead Load - Provision is made for a future wearing surface of 15 pounds per square foot of roadway surface.

DESIGN UNIT STRESSES:

Structural Steel	16,000	pounds	per	square	inch
Reinforcing Steel	20,000	"	"	"	"
Concrete (Lightweight Aggregate)	1000	"	"	"	"
Concrete (Stone Aggregate)	1200	"	"	"	"

CONCRETE: Class "A" air-entrained concrete shall be used for all substructure units. Roadway slab and curbs shall be Haydite, air-entrained concrete. See Special Provisions.

BEVELED EDGES: All exposed edges of concrete shall be beveled ¾" unless otherwise shown or noted.

REINFORCEMENT: All reinforcement steel shall be lapped a minimum of 30 diameters unless otherwise shown. All dimensions to reinforcing steel on detail drawings are to ℄ of bar, except where the clear distance is noted from the face of concrete.

TIMBER PILES: All timber piles shall be driven to sustain a load of 25 tons. They shall have a minimum penetration of 30 feet.

JOINT FILLER: Where joint filler is specified on the plans, it shall conform with the requirements for Expansion Joint Filler, Type "A", as given in Section 117.20 of the Standard Specifications. Payment for filler will be included in unit contract prices for items in which it is placed.

JOINT SEAL: Where joint seal is specified it shall conform to the requirement as given in the Standard Specifications. Payment for seal will be included in contract prices for other items of work.

COPPER FLASHING: Payment for Copper Flashing will be included in unit contract price for concrete.

RIVETS: Rivets are as noted on drawings. Field connections to be riveted unless otherwise shown or noted. No Rivets. Used H.S. Bolts.

△

PAINTING OF METALWORK: Shop coat - Red Lead, first field coat - Aluminum, second field coat - Aluminum. The first field coat of Aluminum shall be tinted with Prussian Blue in order to differentiate it from the second field coat. The second field coat shall be Aluminum, untinted. Payment for cleaning and painting shall be included in the price bid for the respective metal work payment items. No paint required for existing steel.

FABREEKA PADS: See Special Provisions.

ROADWAY WEARING SURFACE: The roadway slab as detailed includes a 2" wearing surface poured monolithically with slab.

EXCAVATION: All excavation above finished ground line is included in quantities for Road Work.
Class I Excavation for Stuctures includes all excavation below finished ground line, or as noted on Benching Detail at New South Abut., and within the limits set forth by the Standard Specifications.

CONSTRUCTION JOINTS: Construction joints shall be made only at the locations shown on the plans. Keys shall be provided at all construction joints.

REVISED BENT 3

NOTES

Dimensioning, bending and hooks for Special Bending Details shall conform to the standards as shown or noted on Sheet 26.

A dash is used in the appropriate dimension column to indicate that a hook, bend or portion of the standard bar type is to be omitted.

For Typical Bar Types and Hook Dimensions, see Sheet 26.

E.F. indicates Each Face.

Threaded plain reinforcing bars are included in above bar list and will be paid for as "Reinforcing Steel".

Cinch Anchors indicated on this sheet shall be type 2, three-unit threaded Ring Wedge Cinch Anchors, or equal.

Cost of furnishing and placing Cinch Anchors shall be included in Lump Sum bid for "Removal of Existing Concrete."

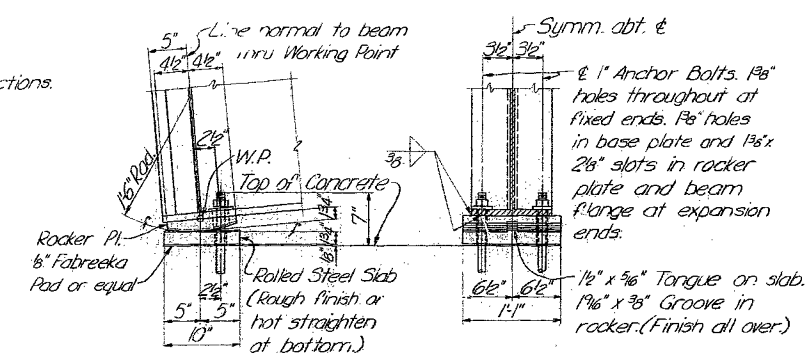
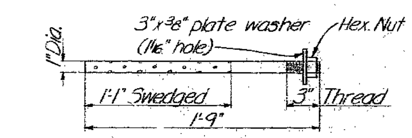
SECTION THRU G1 & G2

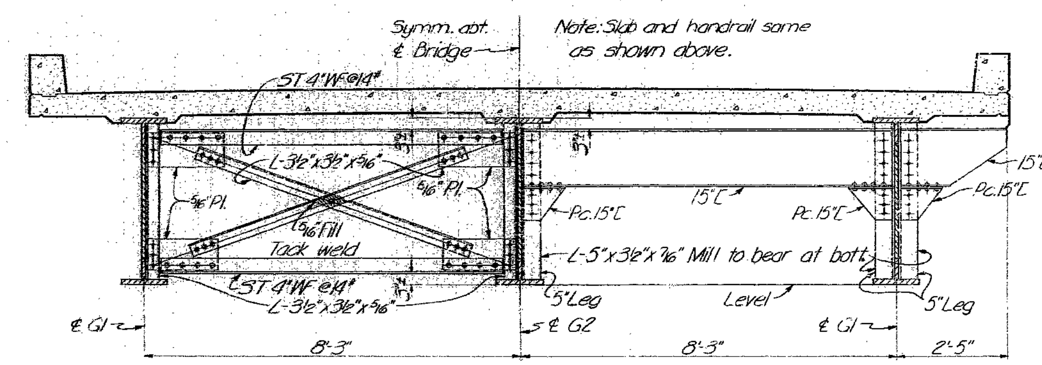


SHOES-SPAN 1
(3 Exp. Required)
(3 Fixed Required)



ANCHOR BOLT
(24 Required)

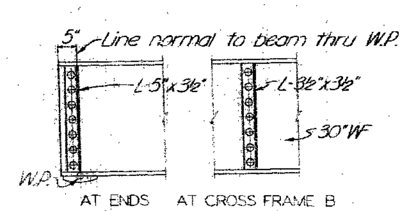
Note: Use this anchor bolt at New South Abut. & New Bent 2. For anchor bolt at Revised Bent 3, see Sheet 23.



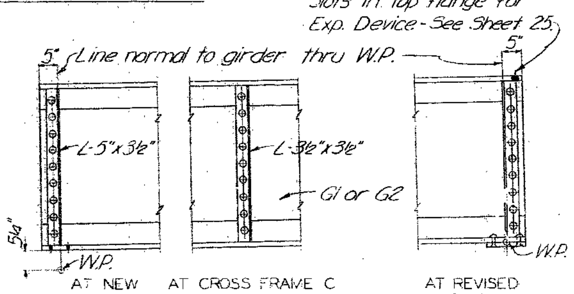
CROSS SECTION THRU SPAN 2

HAUNCH HEIGHTS "Y"		
Span	Beam or Girder	"Y"
1	B1	⅞"
	B2	1"
2	G1	⅝"
	G2	1"

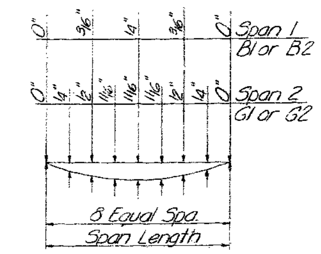
For location of dimension "Y", see Cross Section Thru Span 1.
Dimension "Y" is at ℄ bearing.
For haunches at intermediate points add "Y" to Dead Load Deflection Ordinates.



BEAM ELEVATION



GIRDER ELEVATION



DEAD LOAD
DEFLECTION ORDINATES

Note: Beams & Girders are not to be cambered.
Deflection due to dead load of steel only, equals the following percentages of the deflections shown:
Span 1 = 20%
Span 2 = 30%

NOTES

Work this sheet with Sheet 25.
All rivets in beams or girders shall be ⅞". All others shall be ¾". Where desired for convenience in erection, shop and field rivets may be interchanged.
Steel castings shall conform to A.S.T.M. Designation A27, Grade 65-35, fully annealed. All fillets on castings shall be ½".
Steel forgings for pins shall conform to A.S.T.M. Designation A235, Class C1, fully annealed.
The diameter of turned bolts as billed shall be the shank diameter. The threaded portion shall be 1/16" smaller in diameter than the shank, and the hole shall be the same diameter as the shank, providing a driving fit.

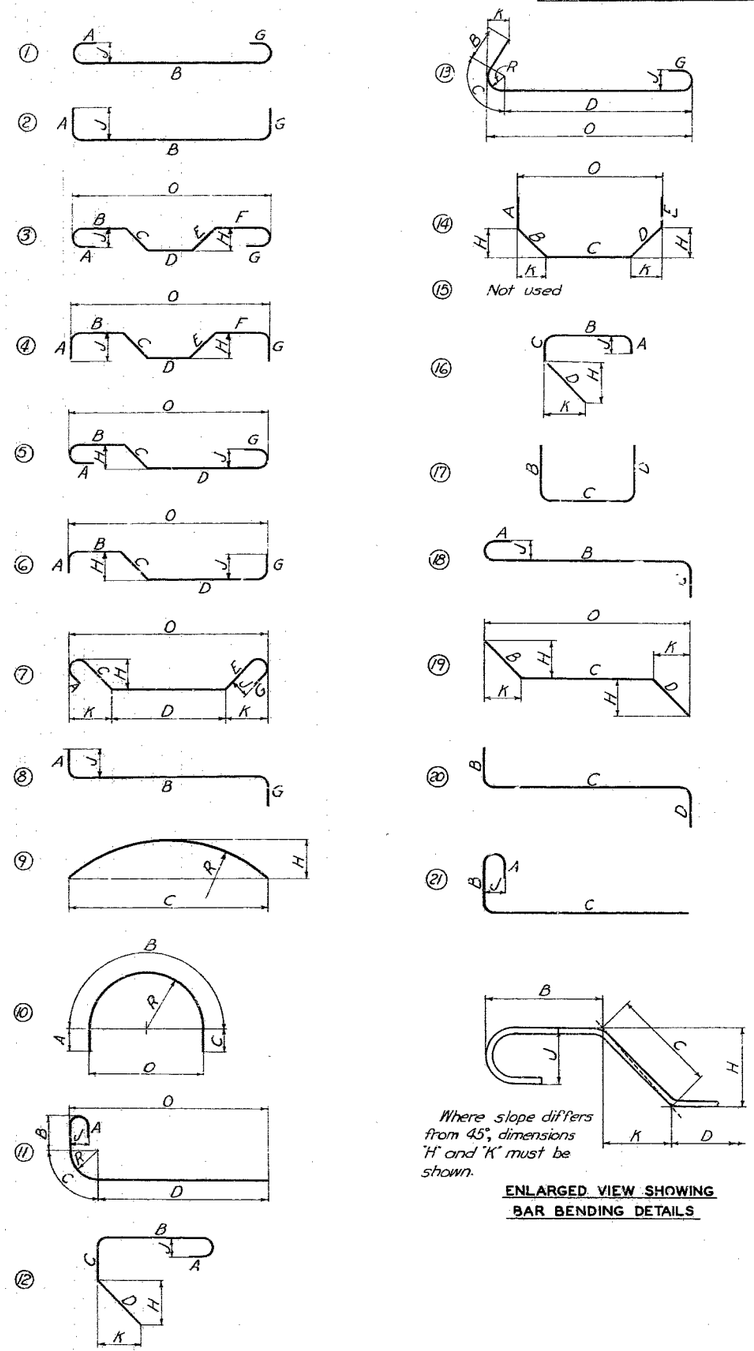
TYPICAL BAR TYPES



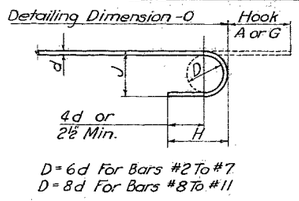
Where slope differs from 45°, dimensions "H" and "K" must be shown.

ENLARGED VIEW SHOWING BAR BENDING DETAILS

NOTES

1. All dimensions are out to out, except "R" which is to inside of bend.
2. "J" Dimension on 180° hooks to be shown in Bar List only where necessary to restrict hook size, otherwise standard hooks are to be used.
3. Where "J" is not shown, "J" will be kept equal to or less than "H". Where "J" can exceed "H", it should be shown in Bar List.
4. "H" Dimension on stirrups to be shown on Bar List where necessary to restrict hooks.
5. Corrections in length, due to bending around a mandrel, will be made only when the radius "R" (as in types 11 and 13) exceeds the standard radii indicated in standard hook dimensions. However, the dimensions "A" or "G" shown for standard hooks have been corrected for curvature.
6. All bends shown are bent around a standard mandrel, except where radius "R" is indicated.
7. Figures in circles show bar types.
8. Where "R" is shown on bar types 9, 10, 11 and 13, the length of bend shall be measured along outside of bend. The length of bar type T3 shall also be measured along outside of bar.

STANDARD HOOK DIMENSIONS



D = 6d For Bars #2 To #7
D = 8d For Bars #8 To #11

180° HOOK

Bar Size	Hook A or G	J	Approx. H

Estimated Quantities for Alternate Asphaltic Concrete Wearing Surface

Type of Wearing Surface	Asphaltic Binder (Megagram)	Mineral Aggregate (Megagram)	SM Fibers (Kilogram)	Mix Used (✓)
SP125MCSM Mix	29.9	445	1468	
SP125MCLP Mix	26.9	439	N/A	

MoDOT construction personnel shall complete column labeled "Mix Used (✓)".

Type PG 70-22 asphalt binder is required in the asphaltic concrete mix for the bridge deck overlay.

The polymer modified asphalt shall be applied at the rate of 1.7 liters per square meter.

The cover aggregate shall be applied at a rate of 15.0 kg per square meter.

Estimated Quantities for Slab on Steel

Item		Total
Reinforcing Steel (Epoxy Coated)	kilogram	10 700
Concrete	cu. meter	45.5

The table of Estimated Quantities for Slab on Steel represents the quantities used by the state in preparing the cost estimate for concrete slabs.
Variations may be encountered in these estimated quantities, but these variations cannot be used for an adjustment in the contract unit price per square meter of Slab on Steel.

Note: Contractor shall protect existing 305 mm gas line and maintain navigation lighting system during construction.

GENERAL NOTES:

State	Proj. No.	Sheet No.
MO		B 2

Design Specifications:
AASHTO - 1996 and Interims thru 1998
Load Factor Design (Slab Replacement)

Design Loading:
MS18

Design Unit Stresses:

Class B Concrete (Substructure)	f'c = 21 MPa
Class B1 Concrete (Barrier End Post)	f'c = 28 MPa
Class B2 Concrete (Slab Replacement)	f'c = 28 MPa
Reinforcing Steel (Grade 420)	fy = 420 MPa
Structural Carbon Steel (ASTM A709M Grade 250)	fy = 250 MPa

Reinforcing Steel:
Minimum clearance to reinforcing steel shall be 40 mm, unless otherwise shown.

Miscellaneous:

A minimum vertical clearance of 6500 mm from top of rails and a minimum lateral clearance of 3800 mm from ℄ track to nearest temporary construction falsework shall be maintained during construction.

Roadway surfacing adjacent to bridge ends to match new bridge overlay.

Structure to be closed to traffic during construction. See roadway plans for traffic control during construction.

High strength bolts, nuts and washers will be sampled for quality assurance as specified in Section 106 of the Missouri Standard Specifications (Metric) and Field Section (FS-712) from Materials Manual.

Dimensions:

All dimensions are shown in millimeters (mm) unless otherwise specified.

Drawings are not to scale. Follow dimensions.

All elevations are specified in meters except as noted.

Old work:
Outline of old work is indicated by light dashed lines.
Heavy lines indicate new work.

Maintain Grade:
In order to maintain grade and a minimum thickness of overlay as shown on plans, it may be necessary to use additional quantities of overlay at various locations throughout the structure. No payment will be allowed for additional labor, materials, or equipment for variations in thickness of overlay.

Verify Dimensions:
Contractor shall verify all dimensions in field before ordering materials.

Bars Bonded in Old Concrete:
Bars bonded in old concrete not removed shall be cleanly stripped and embedded into new concrete where possible. If length is available, old bars shall extend into new concrete at least 40 diameters for smooth bars and 30 diameters for deformed bars, unless otherwise noted.

Structural Steel:
Fabricated structural steel shall be ASTM A709M Grade 250 except as noted.

Coating:

Protective Coating: System G by the contractor. (See Special Provisions.)

All exposed steel including form pans and steel grid shall be prepared, prime coated, intermediate coated and finish coated.

Prime Coat: The cost of the prime coat shall be included in the contract unit price per lump sum of Field Application of Inorganic Zinc Primer. Tint of the prime coat for System G shall be similar to the color of the field coat to be used.

Existing structural steel exposed by the herein described removals which will become inaccessible in the completed rehabilitated structure shall be prepared and coated with a prime coat of the specified coating system while exposed.

Field Coat: The color of the finish coat shall be Gray (Federal Standard #26373). The cost of the intermediate coat shall be included in the contract unit price per lump sum of Intermediate Field Coat (System G) Gray. The cost of the finish coat shall be included in the contract unit price per lump sum of Finish Field Coat (System G) Gray.

Estimated Quantities for Substructure Repair (Formed and Unformed)

Location	Area (sq. meters)
Bent No. 1	0.6
Bent No. 2	9.5
Bent No. 3	2.8
Bent No. 4	0.4
Bent No. 5	16.1
Bent No. 6	10.6
Pier No. 7	11.1
Pier No. 8	0.7
Pier No. 9	2.2
Pier No. 10	1.7
Pier No. 11	0.1
Pier No. 12	0.2
Bent No. 13	3.2
Bent No. 14	7.7
Bent No. 15	8.1
Bent No. 16	0.0
Totals	75.0

Note: The table of Estimated Quantities for Substructure Repair (Formed and Unformed) represents the quantities used by the state in preparing the cost estimate for substructure repairs. Variation may be encountered in these estimated quantities, but these variations cannot be used for an adjustment in the contract unit price per square meter of Substructure Repair (Formed) or Substructure Repair (Unformed).

Some typical substructure repair areas are shown here. Actual repair areas shall be designated by the Engineer.

Clean and seal all areas of substructure caps at Bent/Pier Nos. 2, 3, 4, 5, 6, 7, 8, 11, 12, 13, 14 & 15.

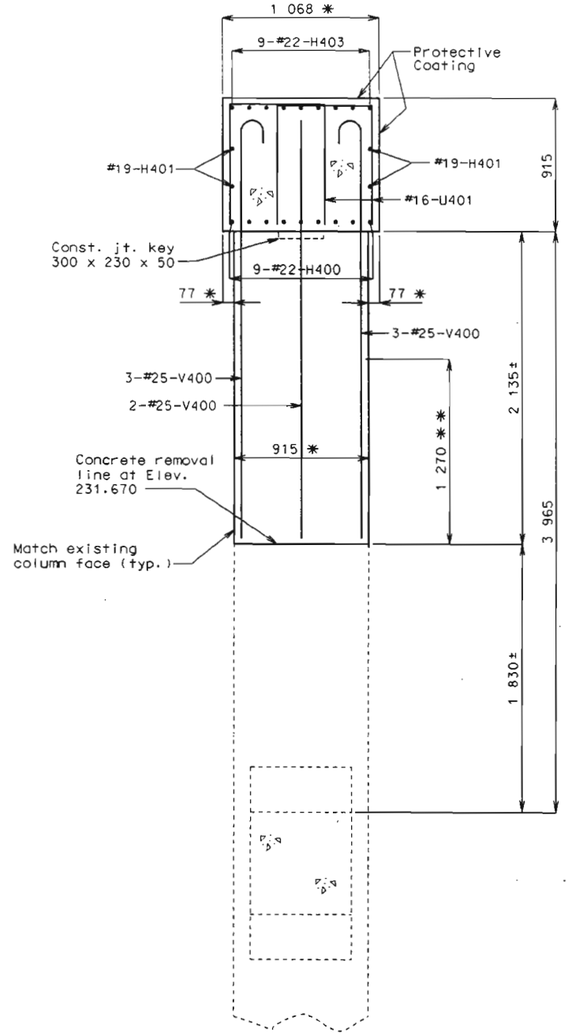
ELEVATION



SECTION A-A

* Match existing.

** Cut off existing vertical bars with 1270 mm projection into new column concrete and lap with new #25-V400 bars.

For Sections B-B and C-C, see sheet no. 5 .

For Plan of Beam, see sheet no. 5 .

Contractor shall provide temporary falsework to support approximately 321 kN at the end of each deck truss (total load = 321 x 4 = 1284 kN) during rehabilitation of Bent No. 14. See Special Provisions.

SUBSTRUCTURE QUANTITY TABLE FOR BT. NO. 14

ITEM		QUANTITY
Partial Removal of Substructure Concrete	lump sum	1
Temporary Falsework	lump sum	1
Class B Concrete (Substr)	cu. meter	8.6
Reinforcing Steel (Epoxy Coated)	kg	975

These quantities are included in the estimated quantities table on sheet no. 2.

① Haunch new slab to bear on existing end diaphragms

② Centered on transverse leg of existing bearing stiffener angle

③ Centered on existing W 410 x 67 cross beam

STRIP SEAL GLAND
MOVEMENT RATING 51 mm

Note: Strip seal gland shall extend to the end of the steel extrusion.

NOTES FOR STRIP SEAL:

The expansion device shall be fabricated and installed in accordance with the recommendations of the manufacturer, and as set forth in the Special Provisions.

The contractor must verify all dimensions prior to fabrication.

All welds shall conform to Section 712 of the Missouri Standard Specifications (Metric).

Splices of the steel extrusion shall develop full strength.

All steel shall be ASTM A709M Grade 250, except steel extrusions shall be ASTM Grade 345W or Grade 250.

Neoprene strip seal shall meet ASTM D-2628M.

Anchors for the extrusions or armor shall be approved welded studs (C1010 thru C1020).

Payment for steel extrusions and neoprene strip seal shall be made under the contract unit price for Strip Seal Expansion Device.

Structural steel for the expansion device shall be coated with a minimum of two coats of inorganic zinc primer (125 micrometers minimum thickness) or galvanized in accordance with ASTM A123. Anchors need not be protected from overspray.

Payment for furnishing, coating or galvanizing, and placing structural steel plates and angles shall be included in the contract unit price for Strip Seal Expansion Device.

The strip seal expansion device shall be bent to conform to crown and grade of roadway.

Concrete shall be forced under and around angles, studs, and support assemblies. Proper consolidation of the concrete shall be achieved by localized internal vibration.

Plan dimensions are based on installation at 16 degrees Celsius. The expansion gap and other dimensions shall be increased 2.0 mm for each 5 degrees Celsius fall and decreased 2.0 mm for each 5 degrees Celsius rise in temperature at installation.

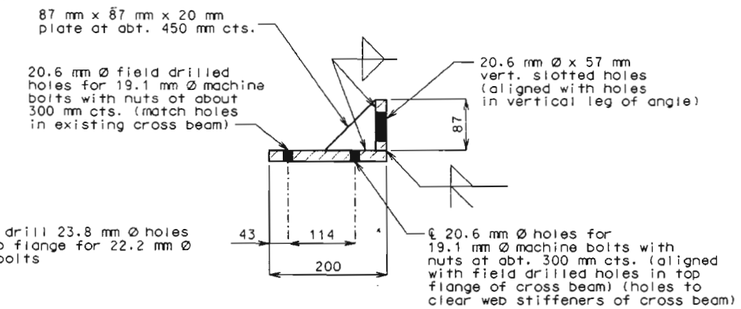
PART SECTION THRU EXPANSION DEVICE

Note: * * For details of Cut C 380 x 50 and its transverse spacing, use same as at Piers No. 8 & 11 as shown on sheet no. 32.



DETAIL OF 20 mm PLATES

① Top & bottom, each side of WF

* Dimension "A" (adjusted to 16°C) minus 484 mm (12 mm min.)

Note: If dimension "*" exceeds 100 mm, then center the ℄ expansion gap on dimension "A" and modify all details affected by the shift of ℄ expansion gap.

Note: Concrete shall be forced under and around finger plate supporting hardware and studs. Proper consolidation of the concrete shall be achieved by localized internal vibration.

GENERAL NOTES:

Finger plates shall be cut with a machine guided gas torch from one plate. The plate from which fingers are cut may be spliced before fingers are cut. The surface of cut shall be perpendicular to the surface of the plate. The cut shall not exceed 3 mm in width. The centerline of cut shall not deviate more than 2 mm from the position of centerline of cut shown. No splicing of finger plate or finger plate assembly will be allowed after fingers are cut.

Plan dimensions are based on installation at 16 degree Celsius. The expansion gap and other dimensions shall be increased 5.4 mm for each 5 degree Celsius fall in temperature and decreased 5.4 mm for each 5 degree Celsius rise in temperature at installation.

Structural steel for the expansion device shall be coated with a minimum of two coats of inorganic zinc primer (125 micrometer minimum thickness) or galvanized in accordance with the ASTM A123. Anchors need not be protected from overspray.

Payment for furnishing, coating or galvanizing, and installing structural steel for the expansion device will be made at the contract unit price for Expansion Device (Finger Plate) per meter.

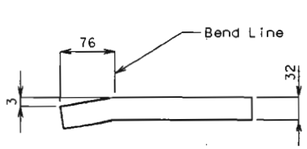
All holes shown for connections to be subpunched 20.6 mm Ø (Shop or field drill) and reamed to 23.8 mm Ø in field.

32 mm Finger Plate, W 310 x 86, and ∠ 178 x 102 x 19.0 shall be bent to conform to crown of roadway.

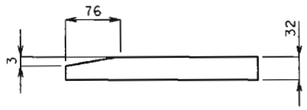
Longitudinal reinforcing steel shall be placed so that ends shall not be more than 25 mm from 20 mm vertical plate, or web of W 310 x 86, at expansion device.

Material for the expansion device shall be ASTM A709M Grade 250 structural steel. Anchors for the expansion device shall be approved stud welded anchors (C1010 thru C1020).

Removal of existing expansion device and support for steel grid on top of stub stringer is included in the contract unit price for Partial Removal of Existing Steel Grid Deck.



OPTIONAL FINGER DETAIL



FINGER DETAIL

TYPICAL PLAN OF PLATE

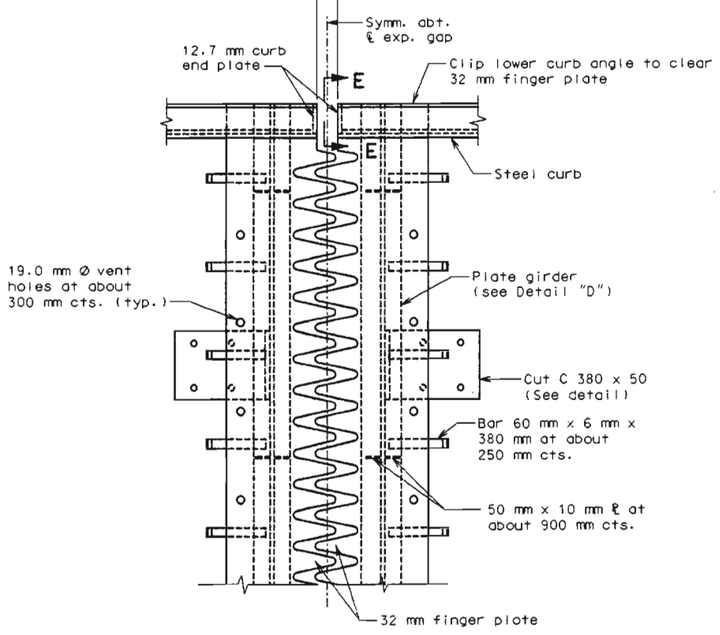
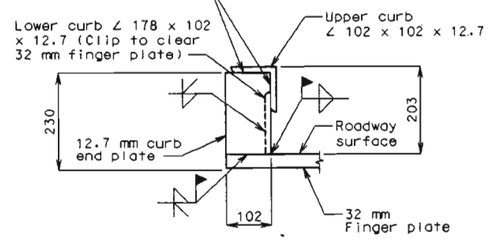
DETAIL OF CUT C 380 x 50

Note: Concrete shall be forced under and around finger plate supporting hardware. Proper consolidation of the concrete shall be achieved by localized internal vibration.

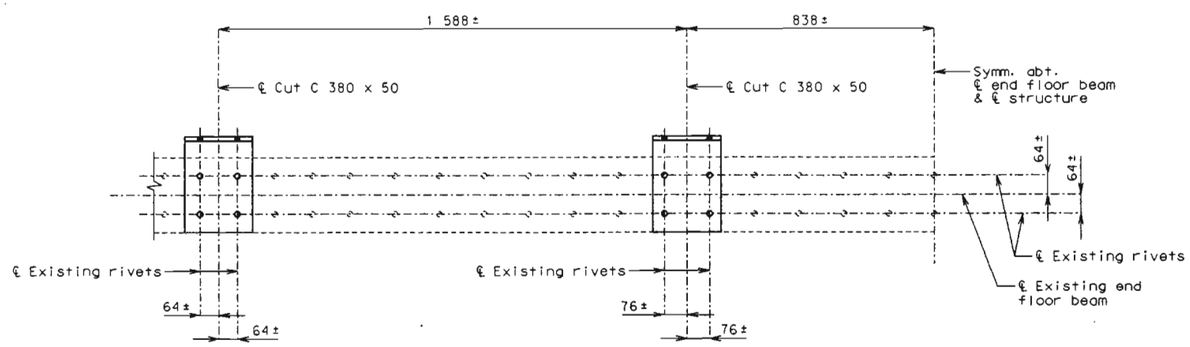


PART PLAN OF EXPANSION DEVICE

Note: 32 mm finger plate expansion device shall extend full width of bridge deck.



SECTION E-E



Note: Remove indicated existing rivets and attach cut C 380 x 50 using 22.2 mm Ø H.S. bolts.

PART PLAN OF EXISTING END FLOOR BEAM (MAIN TRUSS)

(SHOWING LOCATION OF CUT C 380 x 50)

(Use same details for simple span truss)

GENERAL NOTES:

Finger plates shall be cut with a machine guided gas torch from one plate. The plate from which fingers are cut may be spliced before fingers are cut. The surface of cut shall be perpendicular to the surface of the plate. The cut shall not exceed 3 mm in width. The centerline of cut shall not deviate more than 2 mm from the position of centerline of cut shown. No splicing of finger plate or finger plate assembly will be allowed after fingers are cut.

Plan dimensions are based on installation at 16 degree Celsius. The expansion gap and other dimensions shall be increased 7.4 mm for each 5 degree Celsius fall in temperature and decreased 7.4 mm for each 5 degree Celsius rise in temperature at installation.

Structural steel for the expansion device shall be coated with a minimum of two coats of inorganic zinc primer (125 micrometer minimum thickness) or galvanized in accordance with the ASTM A123. Anchors need not be protected from overspray.

Payment for furnishing, coating or galvanizing, and installing structural steel for the expansion device will be made at the contract unit price for Expansion Device (Finger Plate) per meter.

All holes shown for connections to be subpunched 20.6 mm Ø (Shop or field drill) and reamed to 23.8 mm Ø in field.

32 mm Finger Plate and plate girders shall be bent to conform to crown of roadway.

Longitudinal reinforcing steel shall be placed so that ends shall not be more than 25 mm from web of plate girder at expansion device.

Material for the expansion device shall be ASTM A709M Grade 250 structural steel. Anchors for the expansion device shall be approved stud welded anchors (C1010 thru C1020).

Removal of existing expansion device and supporting beams on top of stub stringers is included in the contract unit price for Partial Removal of Existing Steel Grid Deck.

TYPICAL ELEVATION OF END POST

Note: Remove existing end posts at Bent No. 16 to construction joint at top of wing and replace with new end posts as shown.

All exposed edges of end post shall have either a 15 mm radius or a 10 mm bevel, unless otherwise noted.

Concrete in the end post shall be Class B1 with f'c = 28 MPa.

The contractor shall use one of the resin anchor systems listed in the job special provisions. These anchor systems shall be installed according to the manufacturer's specifications, except as modified by the job special provisions.

Cost of furnishing and installing the anchor system complete in place shall be included in the price bid for Remove and Replace End Posts per each.

The 15.9 mm diameter resin anchor systems shall have a minimum ultimate pullout strength of 68.9 kN in concrete with f'c = 28 MPa, see special provisions.

An epoxy coated #16 Grade 420 reinforcing bar as shown here shall be substituted for the 15.9 mm threaded rod stud.

The cost for removing existing end posts and the reconstruction of new end posts shall be included in the price bid for Remove and Replace End Posts per each.

PART PLAN SHOWING LOCATION OF NAVIGATION LIGHTS

GENERAL NOTES FOR NAVIGATION LIGHTING:

Conduit shall be galvanized rigid steel. Each section of conduit shall bear the Underwriters Laboratories, Inc. (UL) label (Sec. 1060).

All conduit from the 41.3 mm Ø main conduit to the light fixtures shall be 25.4 mm Ø flexible metallic conduit.

Weepholes shall be provided at appropriate locations to drain any moisture in the conduit lines.

All junction boxes shall be 305 mm x 305 mm x 102 mm (min.) cast aluminum or stainless steel, drilled for mounting, and meet other requirements of Sec. 1062 except for the requirement to be flanged. See other sheets for mounting details

The terminations shall be permanent or separable.

The terminations and covers shall be of watertight construction.

Navigation lighting shall meet the requirements of the U.S. Coast Guard.

Existing navigation lighting shall be kept in operation during construction. After installing the new system, the existing system and any other older system shall be removed and disposed of as approved by the engineer and shall be included in the pay item for Navigation Lighting System per lump sum.

Expansion fittings shall be installed in conduit lines between all junction boxes as approved by the engineer.

Expansion fittings shall be installed on conduit lines at each slab expansion device.

Expansion fittings shall provide a minimum movement in either direction of 75 mm at expansion device at Pier No. 8 and 25 mm at all other locations between junction boxes.

Light fixtures shall be bridge lamps as manufactured by the Tideland Signal Corporation of Houston, Texas.

The fixtures shall be furnished complete with lamp-out relays, mountings, and all incidentals.

All bolts, nuts, and washers shall be galvanized, except as noted.

Any field-drilled holes required for attachment of above items shall be considered as part of the navigation lighting system.

Payment for furnishing and installing conduit system for navigation lighting, complete in place, will be paid for at the contract unit price for Navigation Lighting System, lump sum.

Note: Navigation lighting required on west side only.

STIRRUP HOOK DIMENSIONS (mm)

Grades 300 & 420 MPa

Bar Size	D	90° Hook A or G	135° Hook A or G	135° Hook Approx. H
#13	50	115	115	80
#16	65	155	140	95
#19	115	305	205	115

Note: unless otherwise noted, diameter "D" is the same for all bends and hooks on a bar.

Detailing Dimension · 90° · 12d · 180° · 4d or 64 mm min.

END HOOK DIMENSIONS (mm)

Bar Size	D	All Grades 180° Hooks A or G	180° Hooks J	90° Hook A or G
#10	60	125	80	150
#13	80	150	105	200
#16	95	175	130	250
#19	115	200	155	300
#22	135	250	180	375
#25	155	275	205	425
#29	240	375	300	475
#32	275	425	335	550
#36	305	475	375	600
#43	465	675	550	775

Two additional #13-P400, #16-R605, #19-H401, #22-H400 and #25-V400 are included in the bar bill for testing.

Note:
All standard hooks and bends other than 180 degree to be bent with the same procedure as for 90 degree standard hooks.
Hooks and bends shall be in accordance with the procedures as shown on this sheet.
E = epoxy coated reinforcement
S = stirrup
X = bar is included in substructure quantities
V = bar dimensions vary in equal increments between dimensions shown on this line and the following line.
No. Ea. = number of bars of each length
Nominal lengths are based on out to out dimensions shown in bending diagrams and are listed for fabricator's use (nearest 5 mm).
Actual lengths are measured along centerline bar to the nearest 5 mm.
Payweights are based on actual lengths.
Four angle or channel spacers are required for each column spiral. Spacers are to be placed on inside of spirals. Length and mass of column spirals do not include splices or spacers.
Reinforcing steel (Grade 420) = FY 420 MPa
